

Sprint 2 requires an MVP deliverable. This means that the first working version of the app should be ready, with the core functionality for the consulting application.

We can (ONLY IF TIME DOES NOT ALLOW) have the application functionable but ugly and barebone design, if the actual functionality works

Core features that must be implemented by end of Sprint 2:

1. Login/ sign up functionality complete
2. Database should be fully up and running
3. Full dashboard set up
4. End scoring metric

Level 1:

1. Clients set up for 5 clients (3 good leads, and 2 bad leads)
2. Dialogue is fully up
3. Movement between user to clients
4. Manager opens task with text
5. Manager closes task with text

Level 2:

1. User can select client
2. Client is rejected/approved by manager
3. User is scored internally for selection of client
4. User is able to write an email to client
5. User is rejected/accepted
6. User is scored

Level 3:

1. Information about case is available to user
2. User can learn about client, industry and business problems
3. Outline stakeholders and possible pain points
4. Decide desirable outcomes and set meeting objectives

Level 4:

1. Persona is LLM powered
2. Client can interact with client and have back and forth conversation
3. Can base LLM score after on: relationship, trust, understanding of clients need, deal potential, client patience etc

Level 5:

1. User can create a suggested proposed solution

2. Users need to create scope, deliverables, timeline, value proposition, price, success metrics
3. AI powered manager reviews, and returns feedback on how to change/ or if it is good to go
4. User sends it as an email to client

Level 6:

1. User can renegotiate with client if client needs changes
2. May need to negotiate with client again, eg client wants to incorporate AI now, so we add AI forecasting (this should be done in real time to simulate a real negotiation)
3. User should receive contract and overall score with metrics of deal quality, relationship, reputation. Then score of lead selection, outreach, meeting prep, client discovery, relationship building, objection handling, deal quality
4. Include AI feedback on where to focus on for user.
